

Newstar KTR-18 Radio Beacon

Brand:

Price: \$1,089.00

Short Description

Range up to 150km at sea. We stock more types of Raio Beacons than anyone in Australia. We sell parts and accessories and we warranty what we sell.

Description

RDF Radio Buoys used by commercial fishermen around the world. Nobody in Australia stocks more or sells more Radio Beacons than Fishing International. The beacons transmit a unique radio signal at a specific frequency to allow the mother vessel to use a radio direction finder to locate the gear and prevent "ghost" fishing or lost gear. Frequency range from 1600 kHz to 2850 kHz. Please specify your own required frequency range or choose from our wide selection. Sel Call and GPS beacons have a transmitter/receiver incorporated in each beacon that is "called" by the mother vessel. The beacon responds with its position and other details. Fishing International stocks more types of radio beacons than everyone else in Australia combined! All have Marine Grade 304 stainless steel foot. We also offer Ryokusei, Taiyo and Sea Star beacons and parts. We have battery canisters, solid batteries, antennae, aerals and rechargeable batteries and chargers for all radio beacons.

We have battery canisters, solid batteries, antennae, aerals and rechargeable batteries and chargers for all radio beacons.
